Art Unit: 2643

1. Claims 1-3, 5 are rejected under 35 U.S.C. 103(a) as being obvious over Shibata et al (US PGPUB. NO. 2001/0004269 hereinafter Shibata) in view of Lenchik et al (WO 01/84269 hereinafter Lenchik).

As to claim 1, as acknowledged by applicants Shibata differs from the claimed invention in not disclosing the axial unit state sensor detects that when the main unit and the flip unit are unfolded at 90° an operation of the first photographic lens is started. Shibata in sections [0241-0249] teaches that when the first photographic lens (camera) is activated, the first camera is turned of in response to the closing of the flip unit; but Shibata does not explicitly disclose starting operation of the first camera.

However, it is old and well known in the art for a foldable portable electronic device such as a cellular phone, pager, PDA, etc. to comprise a position detection means for detecting the relative position of the foldable electronic device to self configure an operational mode based on the detected relative position of the main unit and the flip unit to provide an electronic "device that is intuitively simple to use", for example see Lenchik page 1 lines 4-26, page 3 line 3 to page 4 line 6. Thus, in view of Lenchik's teachings, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Shibata to self configure and start operation of the first photographic lens (camera) when the axial unit state sensor detects that when the main unit and the flip unit are unfolded at 90° to make the camera phone intuitively simple to use; since it would be a simple operation means to turn on the first camera and to determine which camera is to be turn-on.

Art Unit: 2643

As to claims 2, 3, 5, see Shibata Fig. 13, which discloses the various functions selected for execution based on the detected angular relationship of the two housings.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Wing F. Chan whose telephone number is 571-272 The examiner can normally be reached on Monday to Friday from 9 AM to 6 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Curtis Kuntz can be reached on 571-272-7499. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
